

iMac 21.5"

Product Specification

Processor	Intel Core i5 (2.7 GHz)	Weight	9.20kg
Memory	4gb	Display	1920x1080
Hard Drive	1tb	Camera	Yes
Graphics	AMD Radeon HD 6750M 512mb	Wireless	Yes
Keyboard	Yes	Optical Drive	Yes
Bluetooth	Yes		

Product Description

Full brightness with no waiting. That's the advantage of the LED-backlit iMac display. Unlike displays that take time to warm up before they reach maximum brightness, an LED-backlit display is instantly on and uniformly bright. LED backlighting also lets you finely tune the iMac display to suit the ambient light in even the dimmest room.

A 1000:1 contrast ratio gives you more vibrant colors and blacker blacks. All in a 16:9 aspect ratio — the same as an HDTV.

The iMac display looks great from any seat in the house, thanks to a premium display technology called in-plane switching (IPS). IPS gives you a bright picture with excellent color — even if you're viewing the display from the side.

Powered by quad-core processors, the new iMac is our fastest yet — up to 70 percent faster than the previous generation. Every model in the lineup comes standard with the latest Intel Core i5 quad-core processor.
