

## 55" Transparent Organic LED Display Screen

### Product Description

With digital content created for the 55" transparent display screen, it is possible to lead the viewers attention between the background (transparent display content) and display, (luminous display content) which creates fascinating depth and awesome effects. In a unique way, it is possible to combine displayed information and graphics with real objects in the background.

Similar to the clear LCD screens – black content is displayed at translucent and all other colours are displayed as bright and bold content.
